### Air-Sealed Inflatables

- ✓ **No continuous airflow required:** Once inflated, these products are sealed shut and do not need a blower to stay inflated.
- ✓ **Quiet operation:** Ideal for environments where noise is a concern since no fan is running.
- ✓ **Portability:** Lightweight and easy to move or place in areas without power access.
- ✓ **Durability:** Made from heavy-duty materials designed to retain air for extended periods—often used for arches, furniture, or decor.
- ✓ **Ideal for:** Short-term installations, remote locations, or where setup speed and mobility are priorities.

### Constant Air Inflatables

- ✓ **Continuous airflow required:** A fan or blower runs continuously to keep the product inflated.
- ✓ **Stronger structural integrity:** Best for large-scale or high-traffic applications like bounce houses, tents, or interactive displays.
- ✓ **Requires power:** Needs access to electricity for the blower.
- ✓ **Higher airflow = more dynamic form:** These inflatables can be larger and maintain a firmer shape.
- ✓ **Ideal for:** Events with long run times, high visibility, or activities involving movement and interaction.

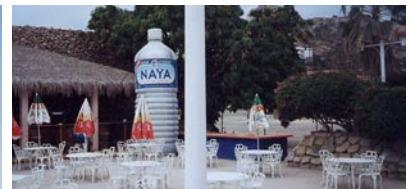

#### INFLATION VALVE

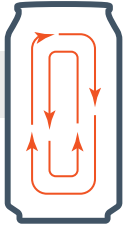

Manual valve designed for controlled inflation and secure sealing of air-sealed structures.

#### INTERNAL AIR BLOWER

Built-in blower for quick and easy inflation of the structure. Requires 110V electricity during use.
